Time Savings — with Regulatory Acceptance

Three cases, one pattern: MASI-AI reduced person-hours by 63–96% compared to conventional approaches — and in all three cases the resulting document was accepted by the competent national authority.

Case	Task	Conventional	With MASI-AI	Saved
A	CAMO Audit Preparation	60 h	10 h	**83%**
B	Master Plan, Level-1 Findings	720 h (3 attempts, not accepted)	32 h (accepted)	**96%**
C	Management of Change, 3 Postholders	64 h / ≈200 pages	24 h / ≈1,000 pages	**63%** (≈93% per page, calculated)

MASI-AI gives Compliance and Safety Teams the power of an established management system.

The bottleneck is not expertise — it is structuring knowledge into traceable, regulatory-acceptable form. MASI-AI closes exactly this gap: structured factual basis, RAG-supported synthesis, human final decision. Result: regulatory conformity by design, scalability without proportional effort (5× volume at ⅓ of the hours), and subject-matter experts remain decision-makers.
